

*Your Safety...Our Commitment*

## We've Got You Covered With Products From Leak Detection to Odorization

Since 1933 Heath Consultants has led the industry in the safety of natural gas utilities infrastructure through the innovative and conscientious actions of our employees. Our innovative products have led to safer survey practices for both gas utilities and within our own field services division.

### RMLD-CS™

The RMLD Complete Solution (RMLD-CS™) utilizes the same TDLAS technology as previous models but in a more convenient, lightweight, single-unit package without compromising performance. It is field rugged and operates under a variety of field conditions including a wide temperature range, light rain and fog.

The Intrinsically Safe (IS) rating allows operators to use it indoors and within potentially hazardous environments such as compressor stations. With detection up to 100 feet away operators can safely survey in areas that may be difficult to reach such as busy roadways, yards with dogs, fenced off areas, compressor stations, overhead piping and other hard to access places.

### ODORATOR 2™

The Heath ODORATOR 2 is an odorization survey audit system or odor intensity test instrument that with proper use fulfills D.O.T. Code 192.625 requirements.

OdorSeer and OdorSeer Remote are advanced PC software which are a key part of the ODORATOR 2. OdorSeer supports custom configuration of the instrument and via its secure database provides powerful readings mapping, data analysis and reporting tools for multiple instruments. OdorSeer Remote supports secure remote configuration and data access.
