Heath Consultants is excited to announce the acceptance of orders for our Remote Methane Leak Detector Complete Solution (RMLD-CS).

The RMLD-CS is a highly advanced technology, capable of detecting methane leaks from a remote distance utilizing the same TDLAS (tunable diode laser absorption spectroscopy) technology as the current Heath RMLD. We have succeeded in reducing the instrument into a single hand-held, lightweight, portable and field rugged instrument, eliminating the separate transceiver and receiver of the previous model.

The RMLD-CS makes it possible to detect leaks in a variety of operating conditions without having to walk the full length of the pipe line, thus creating safer surveys in areas that may be difficult to reach such as busy roadways, yards with dogs, fenced off areas and other hard to access places.

Several new features have been added including:

- Rechargeable and replaceable battery
- Dual battery charger
- Mobile App support
- Ergonomic housing
- Lightweight
- Graphical user interface
- Internal data logging
- WiFi
- GPS
- Bluetooth BLE
- Color camera
- Color display
