DISCOVER® AMLD

Heath® Your Safety Our Commitment

GUIDE TO SELECTING A VEHICLE FOR DISCOVER AMLD

This guide will help you choose a suitable vehicle for the Heath Discover AMLD® system based on your preferred mounting option.

System Components

Mounting Options:

- A front-mounted gas sensor with three available installation options:
  1. A front 2" square receiver hitch.
  2. A Blue Ox® or similar baseplate.
  3. The front grill via front vehicle mount assembly.

Important:

- The hitch and baseplate require the vehicle to be pre-equipped for those systems.
- The grill mount is often preferred for international applications where these systems are not available.
- Components and installation steps may vary depending on your configuration.

Roof Mount Requirements

The roof-mounted instrument (GPS and anemometer) requires the following:

- Two roof rack towers for your specific vehicle (Yakima-compatible recommended, subject to change).
- Vehicle with factory-installed roof rails.

Front Hitch and Blue Ox Vehicles

The easiest way to install the Discover AMLD system is with a front hitch, commonly available on many trucks and larger SUVs.

Note: The front hitch option is not recommended and may not be compatible with unibody vehicles, due to their structural design, including most hybrids, EVs, small SUVs and cars.

For Blue Ox installations, visit blueox.com to confirm compatibility and use a qualified installer.

We've provided a brief list of trucks with front hitch options, subject to change with new model years.

Blue Ox® Sensor Tube installation

Front grill via front vehicle mount installation

Vehicle	Front Hitch Compatibility
Ford® Ranger	Year Dependent
Ford F-150/F-250/F-350	Available
